## COTTON BUFFING WHEELS

Metal workers, foundries, knife makers, gunsmiths, and wood carvers (honing chisels) use these products for finishing. **Buffing wheels, made from 40 plies of cotton sheets, are sewn together** in three degrees of stiffness: **SPIRAL SEWN-HARD**—1/4" tightly sewn is a good general-purpose wheel for coarse buffing. **CUSHION SEWN-MEDIUM**—sewn with concentric circles about 1/2" apart is good for cutting and coloring action. **LOOSE SEWN-SOFT**—sewn with only about 2 concentric circles. Extra soft for final coloring. This is the safest wheel to use with rouge on precious metals. Buffing wheels are about 1/2" thick and can be gang mounted side by side to achieve say 1" or 2" face widths. They have 1/2" arbors which can be mounted on a bench motor, drill press, or on our 1/4", 1/2", or 5/8" wheel adapter mandrels (\$6.50 each), available with left or right turn threading.
