

# METAL WORKING BELTS

## BLACK - WATERPROOF - SILICON CARBIDE BELTS

S.C. Belts are harder and sharper than aluminum oxide belts and available in finer grits than zirconia. S.C. belts are ideal for fine sanding and polishing glass, metal (knife sharpening), stone, etc. Available in grits: 60/80/100/120/150/180/220/240/320/400/600/800. **Priced in boxes of 10 belts. You may combine grits to make up packs of ten. Sale belts are listed in red. We also offer 3M 262 and 3M 272 Imperial Polyester Backed Micron Belts which are waterproof and excellent on steel. See grits printed in green.**

## COMPACT GRAIN & CORK POLISHING BELTS

Compact Grain/Cluster metal working belts can last three to four times longer than AO belts. They leave a satin, brushed look. Knife makers and sharpeners love them. Due to the chunks of grain, their appearance is much rougher than their stated grit. It is advisable to break in each belt for 30 seconds with a scrap piece of metal. Thereafter the grit remains consistent. Grit 120 is made from 3M "multi-cut" 369F. Other grits are Norton, VSM or Schoeder. Available in grits: **120/180/220/320/400/600/800**. Sold individually. Please specify size and grits. Polishing belts are made from natural cork without grit. When the grit on these durable belts is consumed, many of our customers add polishing compounds such as jeweler's rouge for extended use. Polishing discs available below.

ITEM NO.	SIZE	GRITS	REGULAR PRICE	SALE EACH
